

## N,N-DIMETHYLOCTANAMIDE

Item	Value
PRODUCT NAME	N,N-Dimethyloctanamide
PRODUCT IMAGE	The chemical structure of N,N-dimethyloctanamide is shown as a skeletal structure. It consists of an eight-carbon chain (octyl group) attached to a nitrogen atom that is also bonded to two methyl groups. The nitrogen atom is part of an amide group, with a carbonyl oxygen (C=O) attached to the first carbon of the chain.
CAS NUMBER	1118-92-9
WEIGHT	171.28
FORMULA	C <sub>10</sub> H <sub>21</sub> NO
PROPERTIES	Boiling point: : 301.29 ° C (rough estimate) Density : 0.9419 (rough estimate) refractive index : 1.4621 (estimate) EPA Substance Registry System : Octanamide, N,N-dimethyl-(1118-92-9)
SAFETY
