

TREPROSTINIL SODIUM

Item	Value
PRODUCT NAME	treprostinil sodium
PRODUCT IMAGE	 The chemical structure of treprostinil sodium is shown. It consists of a bicyclic core (a bicyclo[2.2.1]heptane derivative) with a phenyl ring attached to one of the bridgehead carbons. The phenyl ring has a propionic acid group (-CH2-CH2-COOH) at the para position. The bicyclic core has two hydroxyl groups (-OH) at the 2 and 3 positions, and a heptyl chain (-CH2-CH2-CH2-CH2-CH2-CH2-CH3) at the 4 position. The stereochemistry is indicated with wedges and dashes.
CAS NUMBER	289480-64-4
WEIGHT	390.517
FORMULA	C ₂₃ H ₃₄ O ₅
